

Tope Taiwo

Full-Stack Software Engineer | Backend Focus

taiwo.tope@proton.me · linkedin.com/in/taiwotopesunday · github.com/topzyray

PROFILE

Software engineer focused on building backend and web applications that remain understandable as products grow. Experienced across modular application design, REST APIs, authentication and authorization, relational data, asynchronous workflows, and multi-tenant products. Works across implementation and architecture, with an emphasis on testable business behavior and maintainable infrastructure boundaries.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python

Backend: Node.js, NestJS, Express.js, REST APIs, event-driven systems

Web and mobile: React, Next.js, React Native, Expo

Data: PostgreSQL, MongoDB, Redis, Prisma

Cloud and delivery: Azure, AWS, Google Cloud, Docker, GitHub Actions

Architecture: modular monoliths, microservices, domain-driven design, clean architecture, dependency inversion

SELECTED EXPERIENCE

NIS Store Management Information System

Worked on backend and frontend components for a modular store management platform covering inventory, requisitions, approvals, dispatch, assets, and organizational structures.

Focus: modular application design, access control, workflow modeling, audit logging, data imports, reporting, and REST APIs.

Klazikschools

Contributed to a multi-tenant school management platform supporting administrators, teachers, students, and parents.

Focus: tenant-aware access, school-specific environments, administrative workflows, academic management, payments, and subscriptions.

Klazik Exams

Built mobile application functionality for an examination preparation product, including authentication, subscriptions, payments, referrals, examination content, and progress tracking.

URI Creative

Contributed to backend services and asynchronous product workflows involving messaging, notifications, reports, file uploads, audit trails, and error handling.

A3T Solutions

Worked across backend architecture, product engineering, infrastructure, and technical direction for a software company building digital products and business systems.

CURRENT FOCUS

Backend engineering with TypeScript and Node.js, distributed systems, system design, performance, application security, cloud architecture, observability, and reliability.
